ABSTRACT OF THE DISCLOSURE

A method of producing a lipophilic liposomal composition includes the step of forming a liposome forming composition by admixing at an elevated temperature at least one lipophilic ingredient selected from a group consisting of pharmaceutical lipophilic ingredients, cosmetic lipophilic ingredients, and cosmeceutical lipophilic ingredients; a liposome-forming lipid component; and, a solubliizer for the liposome-forming lipid component. The resulting liposome forming composition is then cooled.
